COMPANY

Germipasto is a Brazilian company that is one of the leaders in offering forage seeds, currently serving over 15 countries in Latin America. Created 25 years ago in Camapuã, Mato Grosso Sul, Germipasto produces seeds in its own production fields that are processed in its UBS (Seed Processing Unit) with excellent standards of quality in order to provide the lowest cost to the consumer.

The company is a pioneer in seed encrustation, a technique that offers benefits to customers such as better plantability, high purity, and uniform pasture formation.

PRODUCTS

Select Seeds: the selected seeds, processed and handled in the company's UBS, receive encrustation using technology that provides rapid water absorption, increased purity, breaking dormancy and faster germination.

Graphite Seeds: high purity seeds that are processed and treated with fungicides and graphite, free of inert materials and pests.

Germipasto also offers conventional and high purity seeds under high-quality control. The company is a pioneer in the development of the first electric seeder in Brazil, the **VD-TEC**. The equipment has proven beneficial to both livestock and agriculture. It also includes **Cultivares BRS** in its portfolio, forages of origin, with technology developed by Embrapa.

DETAILS ON PRODUCTION CAPACITY, SEASONALITY AND OTHER CHARACTERISTICS:

Comprehensive control of the complete production chain: **planting, harvesting, processing, sales/ distribution.**
